REDEFINING YOUR EHR EXPERIENCE

Clinical Decision Support, Community of Care, Success in Partnership for Long-Term Care and Assisted Living

The people and organizations that work in long-term and post-acute care play a critical role in shaping the healthcare industry. At SigmaCare, our goal is to position these care teams and businesses for success by delivering the right technology and support, allowing the focus to remain on what's most important, providing quality care.

We want to redefine how you see EHRs.

SigmaCare has created an EHR platform that is specifically designed to meet the needs of long-term and post-acute care providers. Drawing upon a deep understanding of LTPAC and assisted living business and clinical needs, SigmaCare's comprehensive EHR platform incorporates advanced clinical decision support, analytics and financial tools to deliver cost reductions and process improvements – all while driving improved clinical results.

We believe in the power of community.

At SigmaCare, we're dedicated to helping you integrate and exchange information with your local partners, including labs, pharmacies and radiology facilities, to develop a community of care. We collaborate with the Community of Care partners to develop clinical content and best practices which are leveraged by our clinical decision support across the workflow. With interoperability and content management tools, your organization can improve operational efficiencies and clinical results.

We are not the average vendor partner.

Your success is our success—that's why we're committed to ensuring your EHR investment delivers a strong ROI, both clinically and financially. We serve as your true partner, going beyond other vendors to ensure you're using the technology to its full potential. Our hands-on, consultative approach ensures your EHR is deployed and optimized to meet your unique operational and financial goals.

Long-term care and assisted living providers using the SigmaCare EHR platform benefit from:

- Increased reimbursement
- Lower costs and lower risk
- Streamlined operational efficiencies
- Reduced re-hospitalizations
- Improved clinical outcomes

Clinical decision support

We believe that "clinical drives everything," which is evidenced by the features within the SigmaCare EHR platform. Our advanced clinical decision support (CDS) starts with physician orders and assessments, and consists of:

- Longitudinal resident data
- Content with clinical standards and best practices
- Interoperability using industry standards
- Business and clinical intelligence

We leverage the resident's clinical information along with clinical content and best practices to deliver real-time clinical decision support at the point of care.

Community of care

SigmaCare's collaborative EHR enables electronic exchange of information across the continuum of care that is integrated into an organization's workflow. This information exchange – enabled through interoperability standards – eliminates siloed information while providing clinicians with comprehensive information about a resident at the point of care. The standard clinical content gathered from Community of Care partners drives CDS at the point of care, and LTPACs collaborate with these partners to optimize and refine clinical best practices over time.

Success in partnership

Our hands-on approach begins with implementation, when we'll work with key staff and executives within your organization to get a comprehensive understanding of your daily operations and long-term plans. To ensure maximum adoption, we'll work with you to fully train your staff, leveraging key adult learning principles and utilizing role-based curriculum.

We believe that "going live" is just the beginning, not the end, of customer support. Our community management team proactively engages your organization to drive betterclinical and financial outcomes ongoing.
To ensure ROI, we offer:

- 24/7/365 support and monitoring
- Rapid issue resolution and application coaching

- Regular onsite meetings with a Performance Consultant
- Online Learning Center for new staff onboarding and training on upgrades

Our EHR Platform

SigmaCare offers a scalable solution, allowing LTPAC and assisted living providers to implement the right technology to meet their business objectives:

Computerized Physician Order Entry (CPOE)

- Census Management
- CPOE and Physician Order Signoff
- Printing Paper MARs/TARs and Labels
- Real-Time Clinical and Analytics Dashboard

Medication Management *(includes CPOE modules)*

- eMAR and eTAR
- Lab and Radiology Results
- 24-Hour Reporting
- Accidents and Incidents
- Progress Notes

Complete EHR *(includes CPOE and Medication Management modules)*

- Clinical Assessments
- MDS and Care Planning
- CNA Documentation
- Rehabilitation Documentation *(via therapy system integration)*
- Document Management

Financials *(can be added to any clinical package)*

- Resident Trust
- Billing and Accounts Receivable
- Clearinghouse and General Ledger File Exchange
- Executive Dashboard
